Subject: Nebraska-Lincoln Summer Research
Date: Thursday, December 05, 2013 10:07:19 AM

I am writing to request your help in identifying undergraduate students who are interested in a summer research experience. I hope you will encourage them to consider applying to the 2014 Nebraska Summer Research Program.

Nebraska's summer program offers research opportunities in the science, technology, engineering, and mathematics fields in addition to a new interdisciplinary Minority Health Disparities program doing research in and around the social sciences. A complete listing of faculty mentors and research project descriptions can be found on our website at http://www.unl.edu/summerprogram. Students can also find information about program benefits including a competitive stipend, room and board, travel expenses, and more.

Summer 2014 programs include:

- Algal Biofuels and Nanohybrid Materials
- Applied Mathematics
- Bioenergy Systems
- Biomedical Engineering
- Chemistry
- Minority Health Disparities
- Redox Biology
- Virology
- Water in the Earth System

During the Nebraska Summer Research Program, students receive first-hand exposure to research and the experience of graduate school. They work closely with faculty mentors and research teams of graduate students and other summer scholars. Students also have opportunities to participate in meaningful social and professional

development activities outside of the laboratory.

Our online application makes it easy for students to apply. **Priority review begins Friday, February 1 and all applications must be completed by Monday, February 17**. Students historically underrepresented in graduate education and students from academic institutions where research programs are limited are especially encouraged to apply.

Please feel free to forward this to your students or to download our flyer to post. If you or your students have questions, please feel free to contact me directly.

Sincerely,

Maggie Jobes
Summer Research Program Director
