Topics:

March 4th – Recycling Sand – Emerging Technologies for Sand-laden Manure

Sand bedding is great for cow comfort but problematic for equipment and handling. In this webinar Mark Jones (Trillium Hill Farm) and Dave Juen (Mac Contractors) both from Wisconsin will discuss new technology for recovering over 95% clean sand from their manure.

March 11th – Manure Application Logistics and Field Strategies – making the most of every minute of application

Custom applicators from Pumped Environmental Services (drag hose) and Pit King Ltd (tanker) will discuss strategies and considerations in planning, set up and application of manure that result in best economic return on volumes applied.

March 18th - Manure Additives – Overview of what's available and how they work From reducing odour and GHG emissions to improving manure consistency; from preventing formation of crusts to improving manure nutrient composition, manure additives promise a variety of functions. Dan Anderson, Ag & Biosystems Engineer at Iowa State U will provide an overview of the types of products available and how to manage them for best results.

March 25 – Composting Bedded Pack Barns - The Ontario Study

Results have been compiled and will be discussed in this continuing exploration of how composting bedded pack systems can maximize cow comfort and udder health, help manure storages and provide high quality manure for nutrient and soil benefits.
