

BIOCHEMISTRY GRADUATE PROGRAM

THE CHEMISTRY OF LIFE

For more than half a century, Indiana University has been a leader in research that uncovers the great mysteries of living organisms. When we look at biochemistry from all angles, we know we're just at the beginning of discovery.

We are looking for Ph.D. students who want to participate in vital studies that write the story of how we live and grow. If you want a truly multidisciplinary research experience, then you're looking for us, too. Our graduate students study a diverse set of biological problems through a unique integration of:

- + Biochemistry
- + Biophysics
- + Molecular biology
- + Structural biology
- + Cell biology
- + Genetics
- + Bioorganic and inorganic chemistry
- + Bioanalytical chemistry

Our faculty members' research interests span nearly all aspects of the structure, function, and dynamics of proteins, nucleic acids, and other biomolecules. You will have many avenues for selecting an area of specialization.
