

CRP2110 BLOG NO. 4

INSTRUCTIONS

For next week's blog post we are looking to develop a site located in downtown Newark. You've already begun researching the site and now you're to develop a solution. Your blog post is going to showcase your team's solution, complete with justification, site plan, and either more detail about your proposal or more detailed renderings.

1: Project Title

2: Project Type

50 to 100 words on what the project is, and "big ideas" you have for the site. If you choose to do a set of renderings for the site, then pay more attention to this.

3: Site plan

The expectation is that you have a well drawn site plan that explains what the project will look like from above. Please provide as much detail as needed. While this is a concept, and not a final product, pretend as if you're pitching your idea to investors who are interested in the site.

4: Proposal Justification or Detailed Renderings w/ Short Justification

You can choose to either have a Proposal Justification OR a Detailed Renderings w/ Short Justification.

4a: Proposal Justification

For your justification, please write between 600-700 words. Think about why you selected your solution. You may refer to your site plan to expound on details; If you visited the site, insert photos of your trip here to support your justification.

4b: Detailed Renderings w/ Short Justification

Include at least 2 other renderings of the site. If you have the ability to show an axonometric view, that would also be an excellent addition to the blog post. Frontal Elevation(s) are one of the two required renderings. *Also:* For your justification, please write between 150-200 words. If you visited the site, insert photos of your trip here to support your justification.

5: Appendix: Other Alternatives

Please list the other ideas your group developed for the site. If your alternative is vague, please provide a brief statement or two to further detail the alternative.
